

## Voice Project File Upload Instructions

Template for deploying updated XML and VBIN language grammar files to RF devices through MDM.

|                         |  |
|-------------------------|--|
| Customer / Project Name |  |
| MDM Device Group        |  |
| Deployment Date         |  |

**Purpose:** Upload the updated XML and language grammar files to the AccuSpeech® VoiceProjects folder so the new grammars are active on RF devices after MDM deployment.

### 01 Files Required

The following files must be deployed together. Replace the placeholder file names with the customer-specific project file names.

| File Name                   | Description                        |
|-----------------------------|------------------------------------|
| <Customer Project>.xml      | AccuSpeech® voice project XML file |
| <Customer Project>_enu.vbin | English grammar language file      |
| <Customer Project>_spm.vbin | Spanish grammar language file      |

*Example: Customer-specific XML and VBIN files to deploy*

 ORS\_Nasco.xml

 ORS\_Nasco\_enu.vbin

 ORS\_Nasco\_spm.vbin

**Important:** Keep the file names exactly the same when deploying through MDM. Do not rename the XML or VBIN files.

### 02 Target Folder on the RF Device

Upload the files to the AccuSpeech® VoiceProjects folder on each RF device:

#### AccuSpeech®/VoiceProjects

Reference: AccuSpeech® folder

 AccuSpeech

 Models

 Registry

 VoiceProjects

## 03 MDM Upload Steps

1. Open the MDM file deployment or file sync profile used for the customer RF devices.
2. Add the updated files: <Customer\_Project>.xml, <Customer\_Project>\_enu.vbin, and <Customer\_Project>\_spm.vbin.
3. Set the device destination path to AccuSpeech®/VoiceProjects.
4. Deploy the MDM profile to the correct customer RF device group.
5. After deployment completes, confirm the files are visible in the VoiceProjects folder on the RF device.
6. Restart AccuSpeech® or reboot the RF device so the updated voice project and grammar files are loaded.

## 04 Validation After Deployment

- Confirm the device has the updated XML file in AccuSpeech®/VoiceProjects.
- Confirm the VBIN language files are in the same folder as the XML file.
- Launch AccuSpeech® and verify the correct voice project loads without errors.
- Test the updated voice commands to confirm the new grammars are active.

## 04 Troubleshooting

| Issue                                | Check   |
|--------------------------------------|---|
| New grammar commands are not working | Confirm all required files were copied to AccuSpeech®/VoiceProjects and the device was restarted. |
| English works but Spanish does not   | Confirm <Customer_Project>_spm.vbin is present in the same folder as the XML file.                |
| Spanish works but English does not   | Confirm <Customer_Project>_enu.vbin is present in the same folder as the XML file.                |
| Voice project does not load          | Confirm the XML file name and VBIN file names were not changed during MDM deployment.             |
